Ist sirand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BX450495

The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) protein used in the method of the invention. The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the polypeptides the MSRV-1 he genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid architisa-associated viruses, and also for prevention and treatment of infection with these

SXC

```
This sequence represents the protein encoded by clone C15 from a novel multiple sclerosis related virus type 1 (MSRV1). The sequence can be used in diagnostic, prophylactic or therapeutic compositions to inhibit expression of a multiple sclerosis related virus and/or virus associated with rheumatoid polyarthritis. (Updated on 27-AUG-2003 to correct OS field.) (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                     SNTIDTTSSOCIRWVTPPTRIVCLPSGIFFVCGTSAYHCLNGSSESMCFLSFLVPPMTIY

```
The present sequence is encoded by a nucleotide sequence corressponding to the 3' env region and long terminal repeat sequences from clone CL6 of Multiple SCIENCESTE retrovirus (MSRV-1). The specification describes a long terminal repeat (LTR)-RUS region which encodes the expression of a MSRV-1 protein. This is unusual for LTRs, in particular in the RUS region. Probes and antibodies to the MSRV-1 retrovirus protein and encoding polynucleotide sequences are used to detect the presence of MSRV-1 retrovirus in a biological sample. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleotide fragment of LTR-RU5 region from Multiple Sclerosis retrovirus (MSRV) used to detect the presence of MSRV-1 retrovirus in a biological

envelope protein expressed by the endogenous human retrovirus MRSV-1 has superantigen activity associated with autoimmune disease. The protien can be detected using the method of the invention. The specification describes a process for detecting activity of a superantigen in a biological sample. The process comprises identifying large scale expansion or loss of lymphocytes that carry at least one of the Vbetal6 expansion of loss of lymphocytes that carry at least one of the Vbetal6 inhibit the superantigen, especially those associated with MRSV-1 which is implicated in autoimmune disease, particularly multiple sclerosis. These agents are potentially useful for treatment or prevention (e.g. as vaccines), of autoimmune diseases
                                                                                                                                                                                                                                                                        OGQAREKQVKEA1SQLTRGHSTPSPYKGLVLSKLHETLRTHTRLVSLFNTTLTRLHEVSA

                                                                                                                                                                                                                                                                                                                                                                                                                         d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated or purified nucleic acid from a virus associated with multiple sclerosis and/or rheumatoid arthritis, anlipible sclerosis associated with multiple sclerosis and/or rheumatoid arthritis, pol, gag or reverse transcriptase genes (or their fragments) encoding the proteins or defined peptides (including immunodominant peptides, conserved motifs). Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a viral material associated with multiple sclerosis or rheumatoid arthritis, a polymeptide exhibiting an inhibitory activity on the proteolytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by immunogenic agent consisting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis, or for detecting in a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-ample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated or purified nucleic acid associated with multiple sclerosis and/or rheumatoid arthritis, useful for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TFTAHTHMPRNCYNSATLCMHANTHYWTGKMINPSCPGGLGATVCWTYFTHTSMSDGGGI 120

endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), allergies, contact dermatitis, disorders of the placents such as preclampsia, abruptio placentes etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunogens for preparing antibodies. Polynucleotides of the invention are useful for creating antibodies. Polynucleotides of the animals to model human diseases. They are also used in gene therapy. The present sequence is human EMBRY-2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

relates to human embryogenesis associated proteins (EMBRY)
                  and nucleic acid molecules encoding such proteins. EMBRY sequences are useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders treated include reproductive disorders such as infertility,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AFTAHTHMPHNCYNSATLCMHANTHYWTGKMINDSCPGGLGATICWTYFTHTGMSDGGGV

This invention describes novel human secreted proteins encoded by polynucleotides isolated from human adult testes, adult brain, adult blood or adult placenta, or murine adult bone marrow or thymus cDNA libraries. The products of the invention are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, haemacopoiesis regulating activity, tissue growth activity, activity, activity, chemotactic/chemokinetic activity, haemostatic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         121 ÓDÓAREKHVKEVISŐLTRVHGTSSPYKGLDLSKLHETLRTHTRLVSLFNTTLTGLHEVSA 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the human secreted protein AJ172 2 amino acid sequence, the polynucleotide encoding AJ172 2 was obtained from a human adult testes constituted ilibrary. The invention relates to secreted human and murine proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the diagnosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds), cytokine and celivity proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, heemacopoiesis regulating activity, chemotactic/chemokinetic activity, haemacopoiesis regulating activity, ceceptor/ligand activity, anti-inflammatory activity, and tumour inhibition activity. The converse are also expression suppressor activity, and tumour inhibition activity. The converse are also expression suppressor activity, and tumour inhibition activity. The converse are also expression suppressor activity, and tumour inhibition activity. The converse are also expression suppressor activity, and tumour inhibition activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                   TFTAHTHMPRNCYHSATLCMHANTHYWTGKMINPSCPGGLGVTVCWTYFTQTGMSDGGGV 120
                                                                      The invention relates to identifying compounds which are modulators of syncytin expression. The syncytin modulators are useful in diagnosis and treatment of preedlampsia and gestational trophoblast disorders (e.g. choriocarcinoma, hydatiform mole, placental site tumour and missed/incomplete abortion). Syncytin is a human gene derived from the envelope gene of human endogenous defective retrovirus, HRRV-W. The present invention is based partly on the discovery that syncytin expression is dramatically reduced in preeclampsia, and is also mis-localised to the apical syncyticitophoblast membrane. The present sequence is human
                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                       9
of syncytin in the cell is modulated in the presence of a test
                                                                                                                                                                                                                                                                                                                                                                 QNPTNCWICLPLNFRPYVSIPVPEQWNNFSTEINTTSVLVGPLVSNLEITHTSNLTCVKF

Disclosure; SEQ ID NO 135; 412pp; English

The invention relates to a protein comprising fully defined A2302 1

Crotein or BD127 1 6 protein. The polymucleotides are useful for expressing recombinant proteins for analysis and are also useful as expressing recombinant proteins for analysis and are also useful as chromosome markers or tags to identify chromosomes or to map related gene continuous. The proteins are useful as amino acid supplement, carbon condined immunodeficiency (SCID), autoimmune disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. severe sclerosis, systemic lupus erythematosus, rhemmatoid arthritis, allergic creations (e.g. asthma), mysolid or lymphoid cell deficiencies, osteoporosis or osteoparthitis, peripheral nervous system diseases (e.g. peripheral neuropathy, Alzheimer's disease, Parkinson's disease), cospelation disorders, inflammatory diseases, Parkinson's disease), cresponse syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease), anaphylaxis and hypersensitivity. Proteins are also useful for inducing tumour immunity, for inducing bone, cartilage, tendon, ligament and/or nerve growth or regeneration for proliferating neural cells and for cregenerating nerve and brain tissue, for inducing fertility and for inducing are also useful as chemokine for inducing are indibiting tumour growth. Proteins are also useful as of emotine for inducing are indibiting tumour growth. Proteins are also useful as of emotine for inducing are also useful as chemokine for inducing are also useful so the proteins are also useful as chemokine for inducing are also useful as chemokine for inducing are also useful as chemokine for inducing are also useful as chemokine for inducing are also useful as chemokine for inducing are also useful as chemokine for analyses. mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also useful as inhibitors of receptor/ligand interactions. The present sequence represents the amino acid sequence of a human secreted protein.

con the basis of the PBS t-RNA motif used for the classification of human candogenous retrovirus (HERVs) the full length endogenous provirus which endogenous retrovirus (HERVs) the full length endogenous provirus which case he located on the long arm of human chromosome 7 (7q21-22) has been designated HERV-W. The present invention describes proteins or peptides (I) having superantigen (SAg) activity comprising the ENV protein (ENV) (CC of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I) have neuroprotective activity, and can be used in: vaccines; antisensetherapy; and HERV-W SAG activity-inhibitors. (I) and encoding DNA/RNA are therapy; and HERV-W SAG activity-inhibitors. (I) and encoding DNA/RNA are covering) capable of binding to a retroviral superantigen associated with MS; substances capable of blocking SAg activity and substances capable of blocking sagard from (I), modified to be capable of blocking transcription or translation of HERV-W retroviral SAG activity and being capable of generating an immune response against HERV-W retroviral SAG activity, capable of binding to a retroviral capable of blocking SAg activity, capable of binding transcription or translation of HERV-W retroviral superantigen associated with MS; or capable of binding transcription or translation of HERV-W retroviral superantigen for use in treating or preventing MS; obtained using (I) are useful for the treatment and preventing of MS. (I) and nucleic acide sequence represents the capable of binding them are useful for diagnosing autoimmune disease. The present sequence represents the capable of preventing of machine envolue of HERV-W present sequence represents the capable of binding them are useful for specifically claimed envelope protein of HERV-W designated G specifically claimed envelope protein of HERV-W designated G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SNTTYTTNSQCIRWVTPPTQIVCLPSGIFFVCGTSAXRCLNGSSESMCFLSFLVPPMTIX 300

The present invention relates to new nucleic acid sequences of human endogenouse retrovirus, HERV-7q, which is located on chromosome 7q. Regulatory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiency of the immune response, e.g. in immunotherapy. HERV-7q peptides and their coding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a human endogenous retrovirus envelope protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of ther types of syncytia), and to promote adhesion of cells in grafts or cellular repair processes. Expression of sequences antisense to the polynucleotide are used to prevent formation of syncytia

The present invention relates to new nucleic acid sequences of human endogenouse retrovirus, HERV-7q, which is located on chromosome 7q.
Regulatory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiency of the immune response, e.g. in immunocherapy. HERV-7q peptides and their coding sequences can be used in immunocherapy. HERV-7q peptides and their coding sequences can be used in immunocherapy. HERV-7q peptides and their coding protection against autoimmune diseases, particularly multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The peptides may also be used (by sequence comparison) to detect/identify endogenous retroviruses that are abnormally expressed in cancer, neuropathologies or other autoimmune diseases.                                                                                                                                                                                                                                                                                                                                                                                    endogenouse retrovirus, HERV-7q, which is located on chromosome 7q. equilatory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiancy of the immune response, e.g. in immunotherapy. HERV-7q peptides and their coding sequences can be used in immunospenic or vaccinating compositions, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protection against autoimmune diseases, particularly multiple sclerosis. The peptides may also be used (by sequence comparison) to detect/identify endogenous retroviruses that are abnormally expressed in cancer, neuropathologies or other autoimmune diseases. The present sequence was used to illustrate the invention

The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Wang J;

The present invention describes isolated polynucleotide sequences (1), which encode polypeptides (11) with biological activity. Also described:
(11) a vector comprising (1); (2) an expression vector comprising (1); (3)
a host cell genetically engineered to comprise (1) which is operatively associated with a regulatory sequence that modulates expression of (1) in the host cell; (4) a polypeptide (II) encoded by (1); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (1) or the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4) in a semple; (9) producing the polypeptide of (4); and (10) a collection of polymucleotides comprising at least one of the polymucleotide sequences (1). The polynucleotides (1) can be used as hybridisation probes, (1). The polymucleotides (1) can be used as hybridisation probes, coligomers or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA. The present sequence represents a human contig polypeptide sequence, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    126 QDQAREKHVKEAISQLTRGHSTPSPYKGLVLSKLHETLRTHTRLVSLFNTTLTGLHEVSA 185

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                            New nucleic acid sequences from human endogenous retrovirus-W - expressed exclusively in placenta and useful in diagnosis and therapy of autoimmune disease, and abnormal or failed pregnancy.
                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents the open reading frame 1 encoding the envergence in the human endogenous retrovirus (HERV) W (AAX25665). Nucleic cacids, their fragments or peptides encoded by them derived from the HERV-W genome are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes associated with this susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CWMCLPLHFRPYISIPIPEQMNNFSTEINTTSVLVGPL-SNLEITHTSNLTCVKFSNTID 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide #4556 encoded by probe for measuring placental gene expression.

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      245

Sequence 263 AA;

S

```
The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expession in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from expension by the probes are useful for verifying the probes of the microarray. The probes are useful for verifying the propession of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring cannown acknown of the proposition of functional information from genomic sequence. The present sequence tag microarrays the method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed sequences:

The proposition but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays.
                                                                                                    245
                                                                                                                                                                                                       119

                                          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                          245

                       The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention

measuring human gene expression in a sample derived from human adult liver. Comprising one of 13109 defined nuclectide sequences given in the specification for complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59990 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at

  The present invention relates to novel single exon nucleic acid probes (see AA100010-AA10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a predicting, diagnosing, grading, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CWMCLPLHFRPYISIPIPEQWNNFSTEINTTSVLVGPL-SNLEITHTSNLTCVKFSNTID 119

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample of the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) agorithmically predicting specific hybridisation of detectably continued and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, comprising (a) identifying exons from genomic sequences of in the above mentioned microarray; assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in the tissues and/or cell types using hybridisation to a single exon common pattern of microarrays having a probe with the exon, where a common pattern of the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the tissues and/or cell types using hybridisation to a single exon common general probes/open reading frames (ORF). The probes are used for general pung exons in a gene, a peptide comprising one cof 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for general for indentifying exons in a gene, particularly using human cancer, chronic obstructive p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       exon probe of

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclecides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in

diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this spatent did not appear in the printed specification, but was obtained in the vipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                        1 MALPYHTFLFTVLLPPFALT......KFVSSRIEAVKLQMVLQMEP 493
